

WATER WIZARD OSCILLATING MOTOR

For 1.0 and 2.0 *Water Wizards* the oscillating motors for the sides and boom are changing to a new style. The new motor and gearbox are larger and more durable but do require an adapter plate when upgrading the first time. The first time this motor is changed over expect it to be a time consuming affair because of the adapter plate addition. The old style motors are being discontinued by *Coleman* so stock of the old motors will deplete quickly.

Old Style Motor and Gearbox – Part# 55236-1

Price: \$426.66

New Style Motor and Gearbox – Part # 55237

Price: \$577.00

The Adapter Kit needs to be requested separately when transitioning to the new style.

Water Wizard Technical Note:

We have seen occasions with the Water Wizard where it will shut down with the boom in down position. This can be due to a setting on the VFD, that controls the motor speed and braking speed of the boom motor. A quick setting change in the VFD controls to increase the amount of braking time will prevent this from happening. If you have any questions on this change please call the service counter at HPWS.

Pictured above is the Old Style Oscillating Motor. Pictures of the New Style Oscillating Motor were not available at this time.

SAVE THE DATES!

February 23-25, 2014

Southwest Car Wash Association Convention
Arlington, Texas
www.swcarwash.org

March 31-April 2, 2014

ICA - The Car Wash Show™
McCormick Place, Chicago, Illinois
www.thecarwashshow.com

Plan on booking hotels and flights early for this convention due to the cost of doing business in Chicago. Our recommendation is to stay in the downtown area rather than out by the convention center. Even though the hotel is near the convention center is closer, many of the **ICA** social activities will be held in the downtown area and it is a more enjoyable area to be located in.
