

WASHGEAR COMPUTER MAINTENANCE

For those of you with Washgear systems, you have a server that requires periodic maintenance. Here are some things to complete:

1. Set your server for automatic backup. Typically this can be done to a USB drive with the automatic Windows backup software. If your computer ever crashes, this will preserve your credit card sales history, fleet and gift card balances, etc.
2. Shut down the computer, open up the case, and blow out all the dust with compressed air. Please note because these run 24/7, a lot of dust can accumulate. Make sure you get dust out of the power supply, fans and heat sinks. This increases the lifespan of your server.
3. Backup your server.
4. Check your operating system. If you are running Windows XP, you are not PCI compliant because Microsoft is no longer issuing security updates for Windows XP. Contact HPWS for a new server.
5. Backup your server.
6. Ensure your anti-virus software is up to date.
7. Make sure any wireless devices, including wireless access points on your modem are turned off.
8. Backup your server.
9. Check to see that all Windows updates have been run. Run them if they have not.

If you don't feel comfortable accomplishing these, please give Tom a call in our service department to schedule a service call from one of our Washgear technicians.
